Rewriting things

saves user a tiny lag before animation starts and feels super smooth. To understand the concept better you can read

The reason you can afford to do this relatively expensive precalculation is because there is a window of 100ms after someone interacts with your site where you're able to do work without them noticing. If you're inside that window users will feel like the site responded instantly! It's only when things are moving that you need to maintain 60fns

a blog post on that or at least this quote from the post:

Repaintless.css demonstration page

Click PLAY to animate elements. Click on any filter to show/hide animated element.

All Slide from right Slide from left Slide from top Slide from bottom Slide from right bottom

Rule of thumb:

Commit to the repository you use

First step is always the hardest

How to make the first step

- 1. Fix typo/whitespace/comma.
- 2. Look through the Issues in the repository you are familiar with.
- 3. Find a first-timer friendly bug.

Sort: Best match ▼

Update links from README.md to this repository

Some links from :pencil:README.md point to the old repository ProjectAton/AtonLab and should be changed to this repository: camilosampedro/Aton.

amilosampedro/Aton Opened by camilosampedro 14 hours ago

Add a Linux command to block internet access without blocking SSH.

On services.exec.SSHFunction add a command that block the computer from accessing internet. The target is to block browser's internet access (:earth_americas: Mozilla Firefox or Google Chrome mainly),

amilosampedro/Aton Opened by camilosampedro 14 hours ago

Add a room button to block a certain user from that room

Add a button on views.roomPanel.scala.html that open a modal window to enter the user that will be blocked and two Confirm-Cancel buttons. - Remember that these buttons should be integrated with the messages ...

amilosampedro/Aton Opened by camilosampedro 15 hours ago

Add a Linux command to block a user's login

On services.exec.SSHFunction add a command that block a user from login on that computer. It should be a single line String and it would be very useful to have comments on what is returned when executed,

```

Is my code good enough?

Ask a friend to validate your idea/code

Is my code good enough?

Is my code good enough?

Steps to release your own project

- 1. GitHub repository.
- 2. Bower/npm/bundler etc.
- 3. Blogpost.
- 4. Demo page (if applicable).
- 5. Spread the word.

choose a unique name to search for mentions easily

mention relevant people on Twitter

make it fun, there is no pressure

thank you

Good Luck and Have Fun

Anna Migas @szynszyliszys
